PROFESSIONAL SUMMARY

QA Test Engineer with over 1 year of experience in Android device testing and software validation on Qualcomm platforms. Experienced in executing functional, system, and end-to-end testing across multiple Android releases. Skilled in STS, CTS, TrustZone (TZ), WLAN, and stability testing, with hands-on expertise in defect analysis, log investigation, and build validation. A proactive team player with strong debugging skills and a commitment to delivering high-quality software products.

TECHNICAL SKILLS

Testing: Functional Testing, System Testing, End-to-End Testing, Sanity Testing, Stability Testing, WLAN Testing, STS, CTS, TrustZone (TZ)

Tools: JIRA, Axiom, QPST, QXDM, QFIL, PCAT.

Programming: Java, Basic Python

Operating Systems: Windows, Linux

PROFESSIONAL EXPERIENCE

QA Test Engineer

Project: Android Security Patch Upgrade (ASPU)

Project Description:

ASPU focuses on validating Android security patch releases on Qualcomm chipsets for various OEM devices. The project involves comprehensive testing to ensure device stability, security compliance, and software quality across multiple releases.

Responsibilities:

- Performed functional, system, and end-to-end testing on Qualcomm Android devices.
- Executed Sanity, Stability, WLAN, STS, CTS, and TrustZone (TZ) testing as part of release validation activities.
- Validated QRD and MTP devices against functional and non-functional requirements.
- Investigated test failures through log analysis using Logcat, Dmesg, Serial Logs, and QXDM.
- Reported and tracked defects in JIRA, working closely with development teams to ensure timely resolution.
- Executed APStress and Monkey test suites through Axiom to assess device stability and performance.
- Performed OTA update validation and verified system functionality after installation.
- Loaded software builds using Fastboot, QFIL, JTAG, and PCAT tools.
- Participated in test case reviews and contributed to overall product quality improvements.
